AB The articles are manufactured by (1) addition of water to 50-80 weight% of the total solid raw materials, consisting of crystalline silicic acid raw materials and calcareous materials, for hydrothermal synthesis of Ca silicate hydrate seed crystals and then pressing in an aqueous slurry containing

the residual 20-50 weight% of the solid raw materials to obtain Ca silicate hydrate which is shaped by dehydration and dried to give the title articles. Thus manufactured articles, having heat resistance, are also claimed. The articles show small drying shrinkage on their manufacture

ST lightwt calcium silicate hydrate article
manuf; drying shrinkage small calcium silicate article; heat resistant calcium silicate article manuf; hydrothermal reaction lightwt calcium silicate article manuf
